I C E X | intellectual capital exchange

AI SUMMIT

What's Real, What's Working, What's Next

This first in-person, cross-accelerator summit will help members move AI from pilots to enterprise-ready processes by sharing candid lessons and experiences with platforms, governance, and deployment. Members across organizational ecosystems will share their AI stories — direct, unfiltered accounts of what has worked and what has failed, using a consistent framework to surface actionable insights.

Members

Abbott · Altria · Chevron · Coca-Cola · CSL · CVS Health · FedEx · Ford · IHG Hotels & Resorts · intel · Lennar · Kimberly-Clark · Koch · Marriott · Merck · Nestlé · Organon · RTX · Stanley Black & Decker · The Hartford · Tyson Foods · WM

OCTOBER 27-29, 2026

THE OMNI CHICAGO HOTEL
676 North Michigan Avenue
Chicago, IL 60611

I C E X | intellectual capital exchange

PRELIMINARY AGENDA

TUESDAY, OCTOBER 27

Introduction: Building An AI Game Plan
Reception/Dinner
Beginning Tuesday evening, and throughout Wednesday, we will be interacting with a set of AI topics, displayed on posters around the room. We will kickstart this on Tuesday night, and continue into Wednesday.

WEDNESDAY, OCTOBER 28

Building An AI Game Plan
First thing Wednesday morning, we will set the stage for how to interact with the posters around the room, via stickies and voting tools, to ultimately select a topic(s) for a deep dive on Thursday morning.

Member AI Use Cases

Merck: Business Process Reengineering
Realizing the tremendous potential to advance Merck's mission with AI, Merck launched five lighthouse use cases early while IT worked in parallel to build the capabilities to support them. IT is driving this work in close partnership with business partners while also creating patterns and registries that strengthen the use cases as they mature. The goal is to deliver business value and reusable capabilities. Rather than layering AI on top of existing processes, the teams are reimagining business processes to achieve greater results.

Ford: Improving Warranty Claims and Reducing Recalls
Ford's Agentic AI-powered Warranty solution has demonstrated a positive, measurable ROI, delivering millions of dollars in cost savings while improving claim quality and operational efficiency. The solution helps identify inaccurate claims, improve repair recommendations, and optimize parts usage while enhancing better dealer submissions and reducing warranty admin burden.

Historically, a lack of integration between data and apps made it difficult to determine root cause in a suspect population of automotive parts. Integrating the data in an Enterprise Data Platform, and applying an AI platform, now detects, tracks and enables the resolution of quality issues through a standard process from identification to design improvement. This allows a defect to be traced to a particular manufacturing site, on a given day, significantly reducing the blast radius of a defect.

Use Case #3 TBD

AGENDA-AT-A-GLANCE

Tuesday, October 27

6:00pm	Introductions Reception/Dinner (Van Gogh Room)

Wednesday, October 28

8:00am	Breakfast (Picasso Ballroom)
8:30	Welcome Member Discussions (Picasso Ballroom)
10:00	30-minute Break
12:00pm	Lunch (676 Restaurant)
1:00	Member Discussions
3:00	30-minute Break
5:00	Meeting Adjourns
5:15	Mingle & Social Time
6:00	Dinner (Van Gogh Room)

Thursday, October 29

7:30am	Breakfast (Picasso Ballroom)
8:00	Meeting Reconvenes (Picasso Ballroom)
10:00	30-minute Break
12:00pm	Departure & Boxed Lunches

PRELIMINARY AGENDA

WEDNESDAY, OCTOBER 28 (Cont)

Panel: AI First Changed Our Roles, Then Our Organization
Mary Sailors, Competency Manager, Data and AI, Chevron
Mike Fulton, Enterprise Architect, Koch Industries
Sandi Garcia, Director, Technical Product Management For Talent Enablement, Merck
The concept of AI native requires that companies reorganize to think, work and behave differently. Work is a developmental mechanism through which people learn context, spot anomalies, and gain the experience needed to challenge future answers. Outsourcing work to AI agents weakens the learning loops that build organizational judgment. How are you thinking about how your organization has to behave differently in the future? How do roles, teams and collaboration evolve?

Panel: The Core Pillars Of Agentic Governance
Marissa Ruffolo, Cyber Security Strategist, Chevron
Isaac Gabay, Vice President, Data and AI, Lennar
Ravi Pandey, Associate Director, Compliance and Risk Mgmt, Organon
Kevin Whitfield, Managing Director, Technology, Tyson Foods
Deploying autonomous agents across the enterprise fundamentally alters organizational risk: decisions previously bound by human judgment and rigid workflow gates are now probabilistic, self-directed, and real-time. How do IT groups govern systems that can execute actions outside direct human oversight? We'll examine the core pillars of agentic governance: defining dynamic autonomy thresholds, managing non-human machine credentials, maintaining audit-grade data lineage, and establishing defensible operational boundaries where human-in-the-loop oversight is mandatory.

Strategic Prioritization: Building An AI Game Plan
On Wednesday afternoon we will review the poster boards, identify affinity clusters, and ultimately select the topic(s) for a deep dive on Thursday morning.

THURSDAY, OCTOBER 29

Action Planning: Building An AI Game Plan
Joran Oppelt, Senior Consultant, The Grove Consultants International will lead members through an intentional, highly participatory process using Grove's visual planning tools.

Working together, we will develop an action plan to translate current AI challenges into practical high-impact opportunities. We will clarify goals and how to reach them by defining key steps, success factors and major challenges all in one place.
